FK Series Transducer

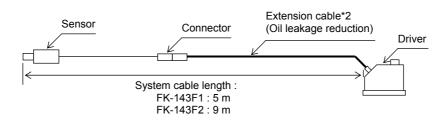

Specifications

FK-143F Transducer Oil leakage reduction extension cable option

Page 1 of 2

	Specifications	Notice					
Calibration material	JIS SCM440 flat surface	1	. Calibration material				
Measuring range	3 mm to 16.5 mm from sensor tip		MODEL FK-143F Transducers are calibrated for JIS SCM440 flat				
Sensitivity*1	0.8 V/mm		surface (more than 81 mm dia.).				
Sensitivity error*1	Within ±4 %		If the measured target is other than JIS SCM440 flat surface, it will				
Linearity*1	Within ±200 μm of 0.8 V/mm straight line : (if calibrated as a system) Within ±270 μm of 0.8 V/mm straight line : (including interchangeability errors) Linear range : 13.5 mm	0	present a different characteristics. In such a case, calibration by the connected equipment (e.g. monitor) side should be required for system operation.				
Frequency responce*1	DC to 200 Hz or more (-3 dB)	2.	Shield wire connection				
Max. output voltage*1	Approx23 VDC		Connect shield wire of signal cable (3-wire shielded cable between				
Sensor abnormal output voltage*1	Approx0.6 VDC (Sensor OPEN/Sensor SHORT)		driver and monitor) to driver's "COM" terminal (Spring lock terminal: "Shield" terminal) and monitor's "COM" terminal.				
Output impedance*1	50 Ω Current 5 mA (max.)		If this is not adhered to, noise may be caused.				
Current consumption	Max15 mA	3.	Connector isolation, etc.				
(10 kΩ load)			The connector connecting the sensor cable and the extension cable				
Output noise*1	Approx. 20 mVpk-pk + power supply noise		shall be insulated with the attached insulation sleeve (transparent				
Sensor tip diameter	Approx. 27 mm dia.		shrink tube) or fluoro resin insulation tape.				
Cable diameter	Approx. 3.6 mm dia.		The vinyl-insulating tape shall not be used.				
Connector diameter	Approx. 7.1 mm dia.	4					
System cable length	5 m or 9 m	4.	Megger test of signal cable If megger test is made on the signal cable (3-wire shielded cable), be				
Sensor cable color	Blue		sure to discharge the charged electric load before connecting the				
Extension cable color	Black		cable to driver.				
Operating temperature	Sensor : -40 to +125 °C		If this caution is not adhered the driver could be dameged.				
range	Extension cable : -40 to +125 °C	_					
	Driver : -40 to +80 °C	5.	Sensor installation				
Temperature characteristic (Temperature drift)	Sensor : Less than ±3 % of F.S. Extension cable : Less than ±3.5 % of F.S. Condition : Gap=14 mm, Target : JIS SCM440 0 to 80 °C (at 20 °C standard) Driver : Less than ±3 % of F.S. Loop : Less than ±5 % of F.S. Condition : Gap=14 mm, Target : JIS SCM440	6.	Not available for rain water at out door use. It may cause the sensitivity change and insulation down. Calibrated as a system The sensor, extension cable and driver, which are calibrated as a system, shall be connected with each serial No. as specified in the inspection test report. If this is not adhered the output characteristics				
Operating humidity range	0 to 60 °C (at 20 °C standard) 30 to 95 % RH (non-condensing, non-submerged) (Sensor body : 100 % RH)		may be out of specification.				
Power supply	-24 VDC ±10 %	7.	Linearity				
Dielectric strength of driver	Between each terminal and mounting plate : 1 mA or less at 500 VAC for one minute		The linearity margin provides for examination result in our factory. This regulated value is not applied to the examination result in the site.				
Insulation resistance of driver	Between each terminal and mounting plate : $100 \text{ M}\Omega \text{ or more at } 500 \text{ VDC}$	8.	The instructions manual contains important information such as conditions necessary for safe handling of the system.				
Applicable wire	Screw type terminal block (M4) : 0.75 to 2mm ²		Such information and conditions are important and indispensable for				
Size	Spring lock terminal : 0.2 to 1.5mm ²		ensuring safety. Therefore, be sure to read the instructions manual				
Driver mass	Approx. 200 g		thoroughly before handling the system.				
Oil leakage reduction performance*2	Even if oil is poured in to the cable with the pressure of 0.05MPa. Oil does not leak from opposite the cable for 7 days. (cable length : 4m, at 25 °C)	9.	Cable length 5.0m sensor is designed for 5m system only. Can not use for 9m system.				
load resistance 10 k Ω	n apply at 25 °C with -24 VDĆ power supply and and JIS SCM440 target (thickness≥5 mm). erformance is applied to the extension cable part.
